Serial No. 10/791,541 Art Unit 1774

Amendment A

Amendments to and Listing of the Claims:

- 1. (Original) An in-mold label composition comprising:
- a microporous sheet substrate having first and second faces;
- a first down coat of a film-forming polymer on the first face of the microporous sheet substrate; and
 - a graphic printed on the first down coat of film-forming polymer.
- 2. (Original) The in-mold label in accordance with claim 1 wherein the microporous sheet substrate is formed from a thermoplastic material.
- 3. (Original) The in-mold label in accordance with claim 2 wherein the thermoplastic material is ultra high molecular weight polyethylene.
- 4. (Original) The in-mold label in accordance with claim 2 wherein the thermoplastic material is ultra high molecular weight polyethylene blend.
- 5. (Original) The in-mold label in accordance with claim 1 wherein the first down coat is a solvent-based film-forming material.
- 6. (Original) The in-mold label in accordance with claim 1 wherein the first down coat is a water-based film-forming material.
- 7. (Original) The in-mold label in accordance with claim 1 wherein the first down coat is a radiation cured material.
- 8. (Original) The in-mold label in accordance with claim 1 wherein the first down coat is a polymer.

Serial No. 10/791,541 Art Unit 1774

Amendment A

- 9. (Original) The in-mold label in accordance with claim 8 wherein the polymer is one or more of an acrylic polymer, a styrene-acrylic copolymer an aliphatic polyurethane, a polyester resin, and a fluoropolymer.
- 10. (Original) The in-mold label in accordance with claim 1 wherein the graphic is a printed media.
- 11. (Original) The in-mold label in accordance with claim 10 wherein the printed media is an ink.
- 12. (Original) The in-mold label in accordance with claim 11 wherein the ink is a colorant carrier by a resin vehicle, the resin vehicle being an acrylic polymer, a polyester, a polyurethane a silicone or an alkyd resin.
 - 13. (Withdrawn) A method for making an in-mold label comprising the steps of: providing a microporous sheet substrate having first and second faces;

coating the microporous sheet substrate with a first down coat of a film-forming polymer on the first face of the microporous sheet substrate;

drying the first down coat to form an undercoated sheet; printing a graphic on the dried first down coat on the undercoated sheet; drying the graphic.

- 14. (Withdrawn) The method in accordance with claim 13 wherein the step of drying the first down coat is by heating.
- 15. (Withdrawn) The method in accordance with claim 13 wherein the step of drying the first down coat is by irradiation.

Serial No. 10/791,541 Art Unit 1774

Amendment A

- 16. (Withdrawn) The method in accordance with claim 13 wherein the step of drying the graphic is by heating.
- 17. (Withdrawn) The method in accordance with claim 13 wherein the step of drying the graphic is by irradiation.
- 18. (Withdrawn) The method in accordance with claim 13 including the steps of cutting the microporous sheet into a shape to form an in-mold label and inserting the in-mold label into a mold.
- 19. (Withdrawn) A method for making a molded article having an in-mold label comprising the steps of:

providing a microporous sheet substrate having first and second faces;

coating the microporous sheet substrate with a first down coat of a film-forming polymer on the first face of the microporous sheet substrate;

drying the first down coat to form an undercoated sheet;
printing a graphic on the dried first down coat on the undercoated sheet;
drying the graphic to form an in-mold label.
securing the in-mold label in a first portion of a mold;
closing the mold to define a mold cavity; and
introducing a polymer into the mold cavity to form the molded article.

20. (Withdrawn) The method in accordance with claim 19 including the step of curing the molded article.
